

## **Manual for installation OfficeBanking Enterprise application**

- Click **Startup** icon from the installation

disc.

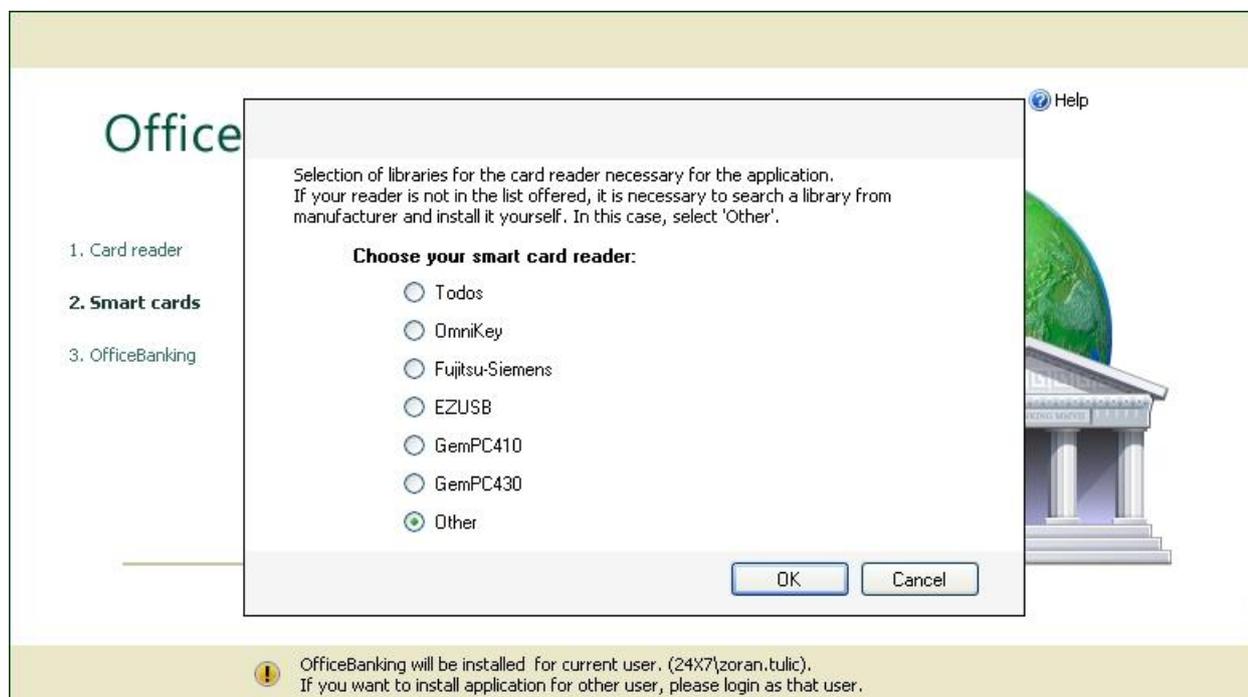

- If the system lacks the components necessary for the application, it will automatically start installing the required software.
- Setup Wizard will then offer option of installing a library (driver) for the card reader.

- If the reader has been installed on your system, select No, I already have it installed and click **Next**.

Ext/Int//PUBLIC

- If the reader has not been installed click Yes, I want it installed and click Next. A window will open with a selection of libraries for the most frequently used card readers. You can choose the right model and then click choose to start the installation of the libraries.

- If libraries (drivers) are not installed on your system, click Yes, I want to install it and click **Next**.
- An alert will appear to insert the card into the reader. If you insert the card, click **Next**, after which installation of the necessary libraries will start.

Ext/Int//PUBLIC

- In the next step the wizard will give you a choice between Desktop and Enterprise versions of OfficeBanking. Choose a version and click **Next**.

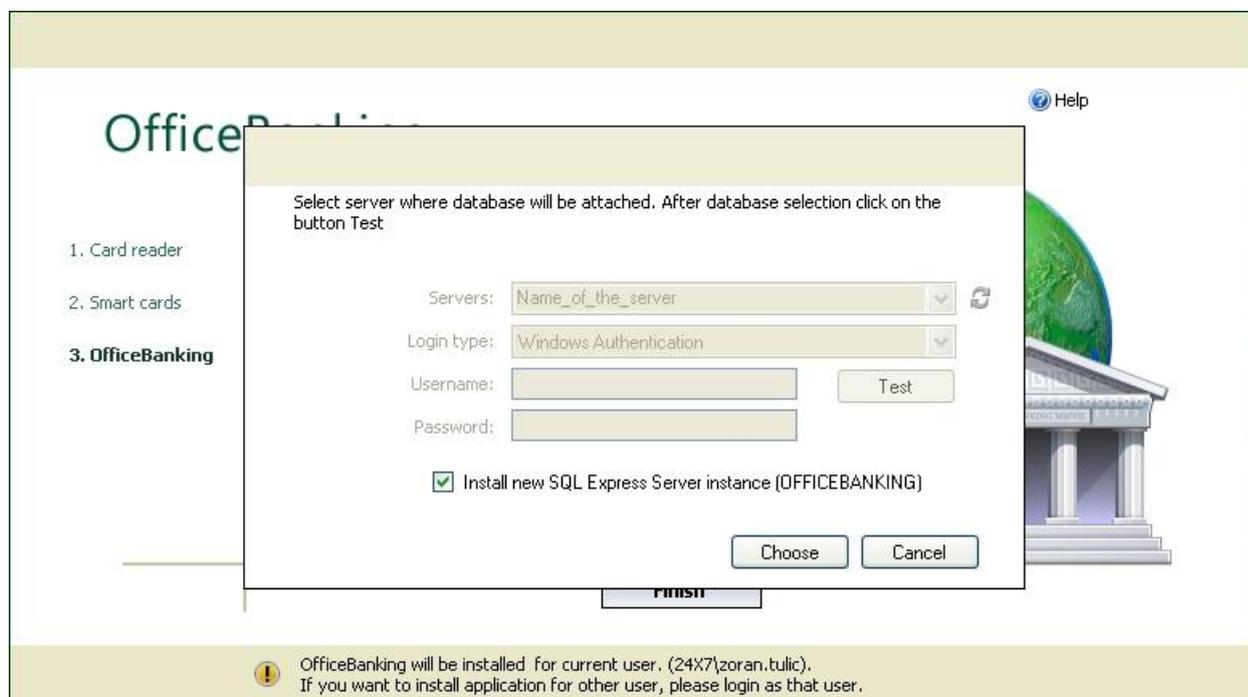

- The wizard will now ask you to select the sql server where application database shall be located.

NOTE: Server is installed on one (first) computer only, and when application is installed on other computers you need to skip this step by clicking Cancel and continue with the installation

Ext/Int//PUBLIC

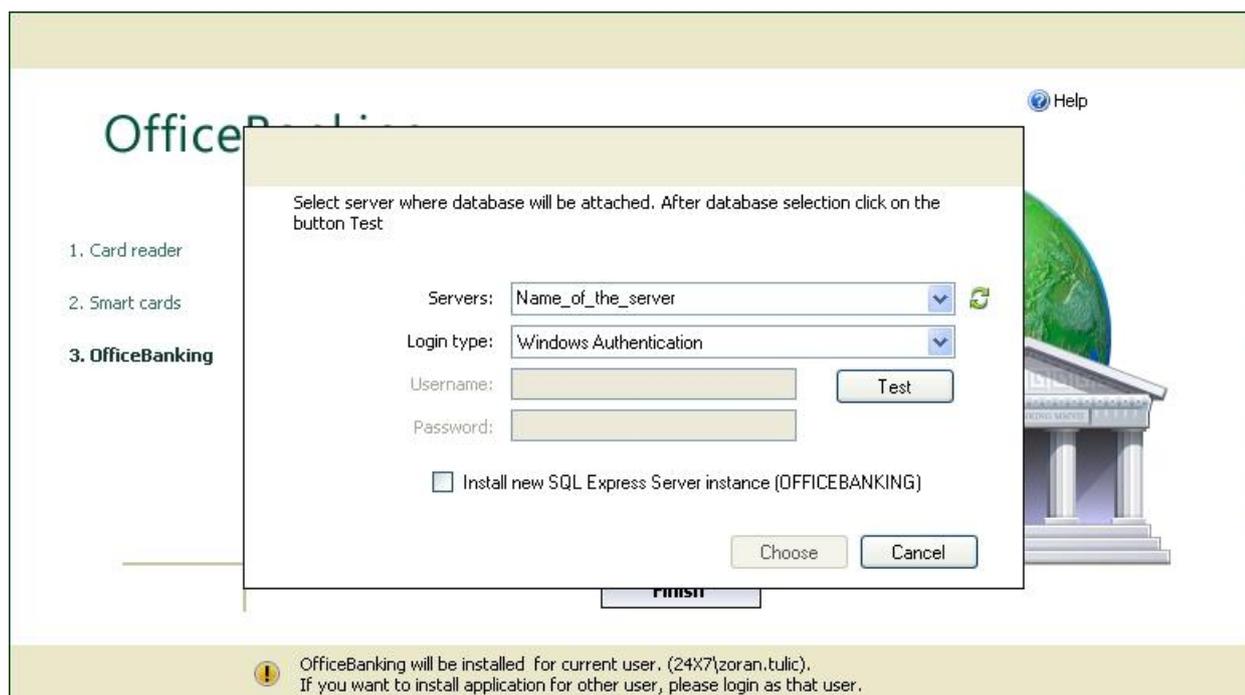

- If there is no server where the database will be located, you can choose to install a new instance of SQL Express Server by checking the box in the bottom of the window and then click **Next**.

Installation will start running with standard options.

Ext/Int//PUBLIC

- If there is a server where the database is located you can refresh the list of present servers by clicking the circular arrows, and you can directly type the server name and select the type of authentication.
- When you select the server you need to click Test button to check the connection to the server. If the test is successful, you can click Select.

- After selecting the server an alert will appear that tells you that the application will be installed only for the computer user who is currently logged in. Click **Continue**.

Ext/Int//PUBLIC

- Then the Installation window will appear, and you should click Install. After this step the installation process will be completed and the program will start running.

Ext/Int//PUBLIC

- When the installation is complete, a window will appear so that you can connect to the server. When you select the server you need to click the button **Test** to check the connection to the server. If the test is successful, you can click **Select**.

The image shows a screenshot of a Windows dialog box titled "SQL Server selection wizard". The dialog has a blue header bar with a close button (X) and a help button (Help). Below the header, the title "SQL Server selection" is displayed, followed by the instruction "Select SQL Server to work with". The main area contains several input fields: "Server name:" with a text box containing "Name\_of\_the\_server" and a refresh button; "Tip logovanja:" with a dropdown menu set to "Predefined Authorization"; "Username:" with a text box; "Password:" with a text box; and a "Test" button. At the bottom, there is a checkbox labeled "Crypt login data" which is unchecked. The dialog concludes with "OK" and "Cancel" buttons.
